1 Stack Overflow: Tag Prediction

- 1. Business Problem
- 1.1 Description

Description

Stack Overflow is the largest, most trusted online community for developers to learn, share their programming knowledge, and build their careers. Stack Overflow is something which every programmer use one way or another. Each month, over 50 million developers come to Stack Overflow to learn, share their knowledge, and build their careers. It features questions and answers on a wide range of topics in computer programming. The website serves as a platform for users to ask and answer questions, and, through membership and active participation, to vote questions and answers up or down and edit questions and answers in a fashion similar to a wiki or Digg. As of April 2014 Stack Overflow has over 4,000,000 registered users, and it exceeded 10,000,000 questions in late August 2015. Based on the type of tags assigned to questions, the top eight most discussed topics on the site are: Java, JavaScript, C#, PHP, Android, jQuery, Python and HTML.

Problem Statemtent

Suggest the tags based on the content that was there in the question posted on Stackoverflow. Source: https://www.kaggle.com/c/facebook-recruiting-iii-keyword-extraction/

1.2 Source / useful links

Data Source: https://www.kaggle.com/c/facebook-recruiting-iii-keyword-extraction/data Youtube: https://youtu.be/nNDqbUhtIRg Research paper: https://www.microsoft.com/en-us/research/wp-content/uploads/2016/02/tagging-1.pdf Research paper: https://dl.acm.org/citation.cfm?id=2660970&dl=ACM&coll=DL

- 1.3 Real World / Business Objectives and Constraints
- 1. Predict as many tags as possible with high precision and recall.
- 2. Incorrect tags could impact customer experience on StackOverflow.
- 3. No strict latency constraints.
- 2. Machine Learning problem
- 2.1 Data
- 2.1.1 Data Overview

Refer: https://www.kaggle.com/c/facebook-recruiting-iii-keyword-extraction/data All of the data is in 2 files: Train and Test.

The questions are randomized and contains a mix of verbose text sites as well as sites related to math and programming. The number of questions from each site may vary, and no filtering has been performed on the questions (such as closed questions).

Data Field Explaination

Dataset contains 6,034,195 rows. The columns in the table are:

- 2.1.2 Example Data point
- 2.2 Mapping the real-world problem to a Machine Learning Problem
- 2.2.1 Type of Machine Learning Problem

It is a multi-label classification problem Multi-label Classification: Multilabel classification assigns to each sample a set of target labels. This can be thought as predicting properties of a datapoint that are not mutually exclusive, such as topics that are relevant for a document. A question on Stackoverflow might be about any of C, Pointers, FileIO and/or memory-management at the same time or none of these. **Credit**: http://scikit-learn.org/stable/modules/multiclass.html

2.2.2 Performance metric

Micro-Averaged F1-Score (Mean F Score): The F1 score can be interpreted as a weighted average of the precision and recall, where an F1 score reaches its best value at 1 and worst score at 0. The relative contribution of precision and recall to the F1 score are equal. The formula for the F1 score is:

```
F1 = 2 * (precision * recall) / (precision + recall)
```

In the multi-class and multi-label case, this is the weighted average of the F1 score of each class.

'Micro f1 score': Calculate metrics globally by counting the total true positives, false negatives and false positives. This is a better metric when we have class imbalance.

'Macro f1 score': Calculate metrics for each label, and find their unweighted mean. This does not take label imbalance into account.

https://www.kaggle.com/wiki/MeanFScore http://scikit-learn.org/stable/modules/generated/sklearn.me Hamming loss: The Hamming loss is the fraction of labels that are incorrectly predicted. https://www.kaggle.com/wiki/HammingLoss

- 3. Exploratory Data Analysis
- 3.1 Data Loading and Cleaning
- 3.1.1 Using Pandas with SQLite to Load the data

```
[2]: #Creating db file from csv
   #Learn SQL: https://www.w3schools.com/sql/default.asp
   if not os.path.isfile('train.db'):
       start = datetime.now()
       disk_engine = create_engine('sqlite:///train.db')
       start = dt.datetime.now()
       chunksize = 180000
       j = 0
       index_start = 1
       for df in pd.read_csv('Train.csv', names=['Id', 'Title', 'Body', 'Tags'], __
    df.index += index_start
          j+=1
          print('{} rows'.format(j*chunksize))
           df.to_sql('data', disk_engine, if_exists='append')
           index_start = df.index[-1] + 1
       print("Time taken to run this cell :", datetime.now() - start)
```

3.1.2 Counting the number of rows

```
if os.path.isfile('train.db'):
    start = datetime.now()
    con = sqlite3.connect('train.db')
    num_rows = pd.read_sql_query("""SELECT count(*) FROM data""", con)
    #Always remember to close the database
    print("Number of rows in the database :","\n",num_rows['count(*)'].
    \to values[0])
    con.close()
    print("Time taken to count the number of rows :", datetime.now() - start)
else:
    print("Please download the train.db file from drive or run the above cell_\( \)
    \to genarate train.db file")
```

```
Number of rows in the database :
    6034196
   Time taken to count the number of rows: 0:00:04.984194
     3.1.3 Checking for duplicates
[4]: #Learn SQl: https://www.w3schools.com/sql/default.asp
   if os.path.isfile('train.db'):
       start = datetime.now()
       con = sqlite3.connect('train.db')
       df_no_dup = pd.read_sql_query('SELECT Title, Body, Tags, COUNT(*) as_

¬cnt_dup FROM data GROUP BY Title, Body, Tags', con)
       con.close()
       print("Time taken to run this cell :", datetime.now() - start)
   else:

→genarate train.db file")
   Time taken to run this cell: 0:04:23.749168
[5]: df_no_dup.head()
   # we can observe that there are duplicates
[5]:

```

```
plt.ylabel("Number of times tag appeared")
plt.legend()
plt.show()
print(len(tag_counts[0:100:5]), tag_counts[0:100:5])
```

20 [331505 221533 122769 95160 62023 44829 37170 31897 26925 24537 22429 21820 20957 19758 18905 17728 15533 15097 14884 13703]

```
[30]: # Store tags greater than 10K in one list
lst_tags_gt_10k = tag_df[tag_df.Counts>10000].Tags
#Print the length of the list
print ('{} Tags are used more than 10000 times'.format(len(lst_tags_gt_10k)))
# Store tags greater than 100K in one list
lst_tags_gt_100k = tag_df[tag_df.Counts>100000].Tags
#Print the length of the list.
print ('{} Tags are used more than 100000 times'.format(len(lst_tags_gt_100k)))
```

153 Tags are used more than 10000 times 14 Tags are used more than 100000 times

Observations: 1. There are total 153 tags which are used more than 10000 times. 2. 14 tags are used more than 100000 times. 3. Most frequent tag (i.e. c#) is used 331505 times. 4. Since some tags occur much more frequenctly than others, Micro-averaged F1-score is the appropriate metric for this probelm.

3.2.4 Tags Per Question

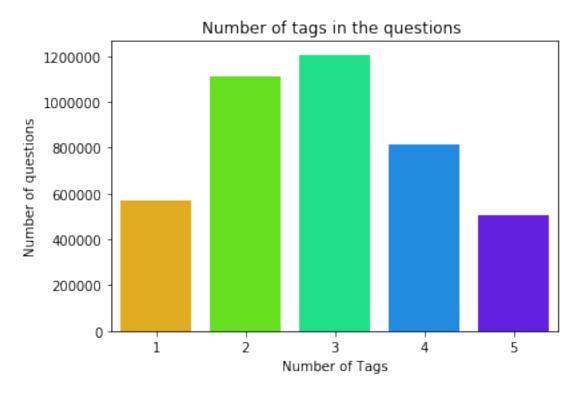

```
[31]: #Storing the count of tag in each question in list 'tag_count'
tag_quest_count = tag_dtm.sum(axis=1).tolist()
#Converting list of lists into single list, we will get [[3], [4], [2], [2], [2], [3]] and we are converting this to [3, 4, 2, 2, 3]
tag_quest_count=[int(j) for i in tag_quest_count for j in i]
print ('We have total {} datapoints.'.format(len(tag_quest_count)))
print(tag_quest_count[:5])
```

We have total 4206307 datapoints. [3, 4, 2, 2, 3]

```
[32]: print( "Maximum number of tags per question: %d"%max(tag_quest_count))
print( "Minimum number of tags per question: %d"%min(tag_quest_count))
print( "Avg. number of tags per question: %f"% ((sum(tag_quest_count)*1.0)/
→len(tag_quest_count)))
```

Maximum number of tags per question: 5 Minimum number of tags per question: 1 Avg. number of tags per question: 2.899443

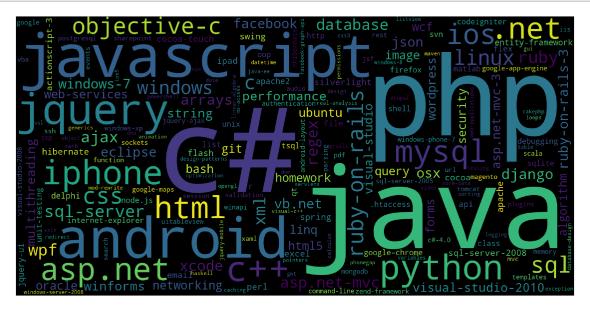

```
[33]: sns.countplot(tag_quest_count, palette='gist_rainbow')
plt.title("Number of tags in the questions ")
plt.xlabel("Number of Tags")
plt.ylabel("Number of questions")
plt.show()
```

Observations: 1. Maximum number of tags per question: 5.2. Minimum number of tags per question: 1.3. Avg. number of tags per question: 2.899.4. Most of the questions are having 2 or 3 tags.

3.2.5 Most Frequent Tags

```
[34]: # Ploting word cloud
     start = datetime.now()
     # Lets first convert the 'result' dictionary to 'list of tuples'
     tup = dict(result.items())
     #Initializing WordCloud using frequencies of tags.
     wordcloud = WordCloud(
                               background_color='black',
                               width=1600,
                               height=800,
                         ).generate_from_frequencies(tup)
     fig = plt.figure(figsize=(30,20))
     plt.imshow(wordcloud)
     plt.axis('off')
     plt.tight_layout(pad=0)
     fig.savefig("tag.png")
     plt.show()
     print("Time taken to run this cell :", datetime.now() - start)
```

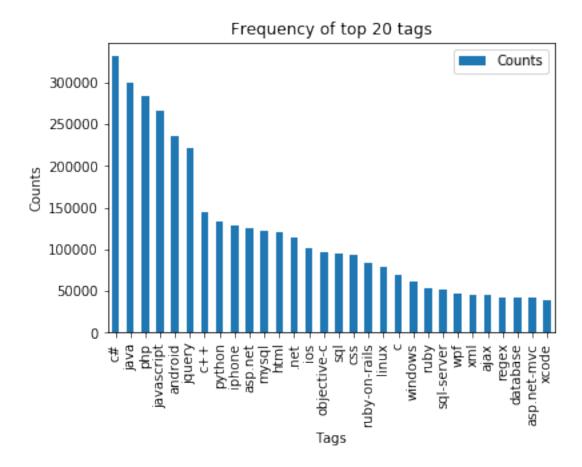

Time taken to run this cell: 0:00:03.136614

Observations: A look at the word cloud shows that "c#", "java", "php", "asp.net", "javascript", "c++" are some of the most frequent tags.

3.2.6 The top 20 tags

```
[35]: i=np.arange(30)
  tag_df_sorted.head(30).plot(kind='bar')
  plt.title('Frequency of top 20 tags')
  plt.xticks(i, tag_df_sorted['Tags'])
  plt.xlabel('Tags')
  plt.ylabel('Counts')
  plt.show()
```

Observations: 1. Majority of the most frequent tags are programming language. 2. C# is the top most frequent programming language. 3. Android, IOS, Linux and windows are among the top most frequent operating systems.

3.3 Cleaning and preprocessing of Questions

3.3.1 Preprocessing

Sample 1M data points

Separate out code-snippets from Body

Remove Spcial characters from Question title and description (not in code)

Remove stop words (Except 'C')

Remove HTML Tags

Convert all the characters into small letters

Use SnowballStemmer to stem the words

```
[36]: def striphtml(data):
         cleanr = re.compile('<.*?>')
         cleantext = re.sub(cleanr, ' ', str(data))
         return cleantext
     stop_words = set(stopwords.words('english'))
     stemmer = SnowballStemmer("english")
[37]: #http://www.sqlitetutorial.net/sqlite-python/create-tables/
     def create connection(db file):
         """ create a database connection to the SQLite database
